

Tomato MALKAL F1

Solanum lycopersicum L.

"MONGAL F1 with better firmness and tolerance to TYLCV"

Selected for its tolerance to Fusarium wilt and TYLCV, MALKAL F1 allows you to make the difference in the very hot season and during the rainy season. MALKAL F1 is similar to MONGAL F1 with a slightly larger size and a clear gain in firmness. Its TYLCV tolerance is an asset against the transmission of the virus by the white fly.

PLANT

- Determined growth
- Very good vigour
- Excellent fruit setting

FRUIT

- Flattened and slightly ribbed
- Bright red at maturity
- Size: 90 - 100 g

MATURITY

- 60-65 days after transplantation

TOLERANCES

- *Fusarium oxysporum* (Fol 0,1)
- TYLCV (*Tomato yellow leaf curl virus*)
- TMV (0) (*Tobacco Mosaic Virus*)
